What is fear of cancer recurrence?

Fear of cancer recurrence is the fear or worry that cancer could return or spread in the same place or any other part of the body.

Fear of cancer recurrence affects most people after finishing cancer treatment.

It is normal and understandable to be worried about your cancer coming back or progressing.

The diagram below shows common features of fear of cancer recurrence.

Common fears about cancer returning or progressing

- Further treatment
- Further disability, pain or suffering
- Impact on quality of life
- Being unable to fulfil obligations
- Impact of a recurrence on loved ones
- Loss and grief about not being able to live out lifetime goals
- The possibility of death and the process of dying

Events or experiences which may increase your fears

- Follow-up appointments or scans
- Physical symptoms or changes
- Anniversaries of major cancer events such as diagnosis
- Hearing about cancer stories in the news, celebrities, or other people's cancer experience
- Seeing others who have cancer and having treatment when you go for appointments

If your fear of cancer recurrence is high, you may have intrusive thoughts or images about the cancer returning or progressing.

- You may be very alert and looking out for physical symptoms
- You might notice aches, pains and changes in how you feel or look
- You might check physical symptoms excessively or avoid symptom monitoring
- You might notice a lot of anxiety about tests, scans, treatment, or medical appointments

These concerns may impact daily life and cause a lot of distress or anxiety for people with high levels of fear of cancer recurrence.

If you are worried about cancer returning or progressing, what can you do?

Acknowledge your fears

You might write them down or tell them to a friend or family member. Remind yourself that it's very normal and understandable to be worried about your cancer coming back or progressing.

Get to know your triggers

Be aware of times when your fear will be higher and plan how you will manage your fears at that time. For example, when you have an upcoming scan, you might write your worries down, do things that are important to you, practice your relaxation, and make sure you eat and sleep well.

Ask questions

Write a list of questions for your cancer team.

Learn the symptoms

Ask your doctors what symptoms you need to watch out for, how to check symptoms (if applicable),

and how/when to respond to new symptoms. Try to keep to their guidelines, and remind yourself that not all physical symptoms are signs of cancer.

Do things that are important to you

Do things that are important to you, even if you are feeling fearful or worried.

Talk to someone you trust about your fears

People around you might not want to tell you they are also worried about the possibility of your cancer returning or progressing. Let them know how you're feeling and that you'd just like them to listen and hear your concerns.

Do regular relaxation

Do regular relaxation such as calming breathing, or mindfulness meditations. Try to do 5-15 minutes of relaxation each day and immediately when you are having thoughts of recurrence.

Keep a healthy lifestyle

Avoid foods or drinks that increase your anxiety such as caffeine or alcohol. Continue exercising as you usually do. Try to keep to [healthy sleep habits](#).

Seek help from a mental health professional

It can be helpful to speak to a mental health professional about how you are feeling. Explore your options listed at the bottom of this page.

Finding a mental health professional

You can begin by speaking to your General Practitioner (GP). GPs can discuss your emotional concerns with you and can link you to supports in the local community, such as a psychologist or social worker.

You can also speak to your cancer clinician. Most cancer services have a range of psychological support options including psychologists, social workers, psychiatric nurses and psychiatrists. If this isn't available at your local health service, ask them what support is available in the local community.

You can find a local Psychologist with a referral or a mental health care plan from your GP.
